What is the Brain Imaging Data Structure and why you should know about this!

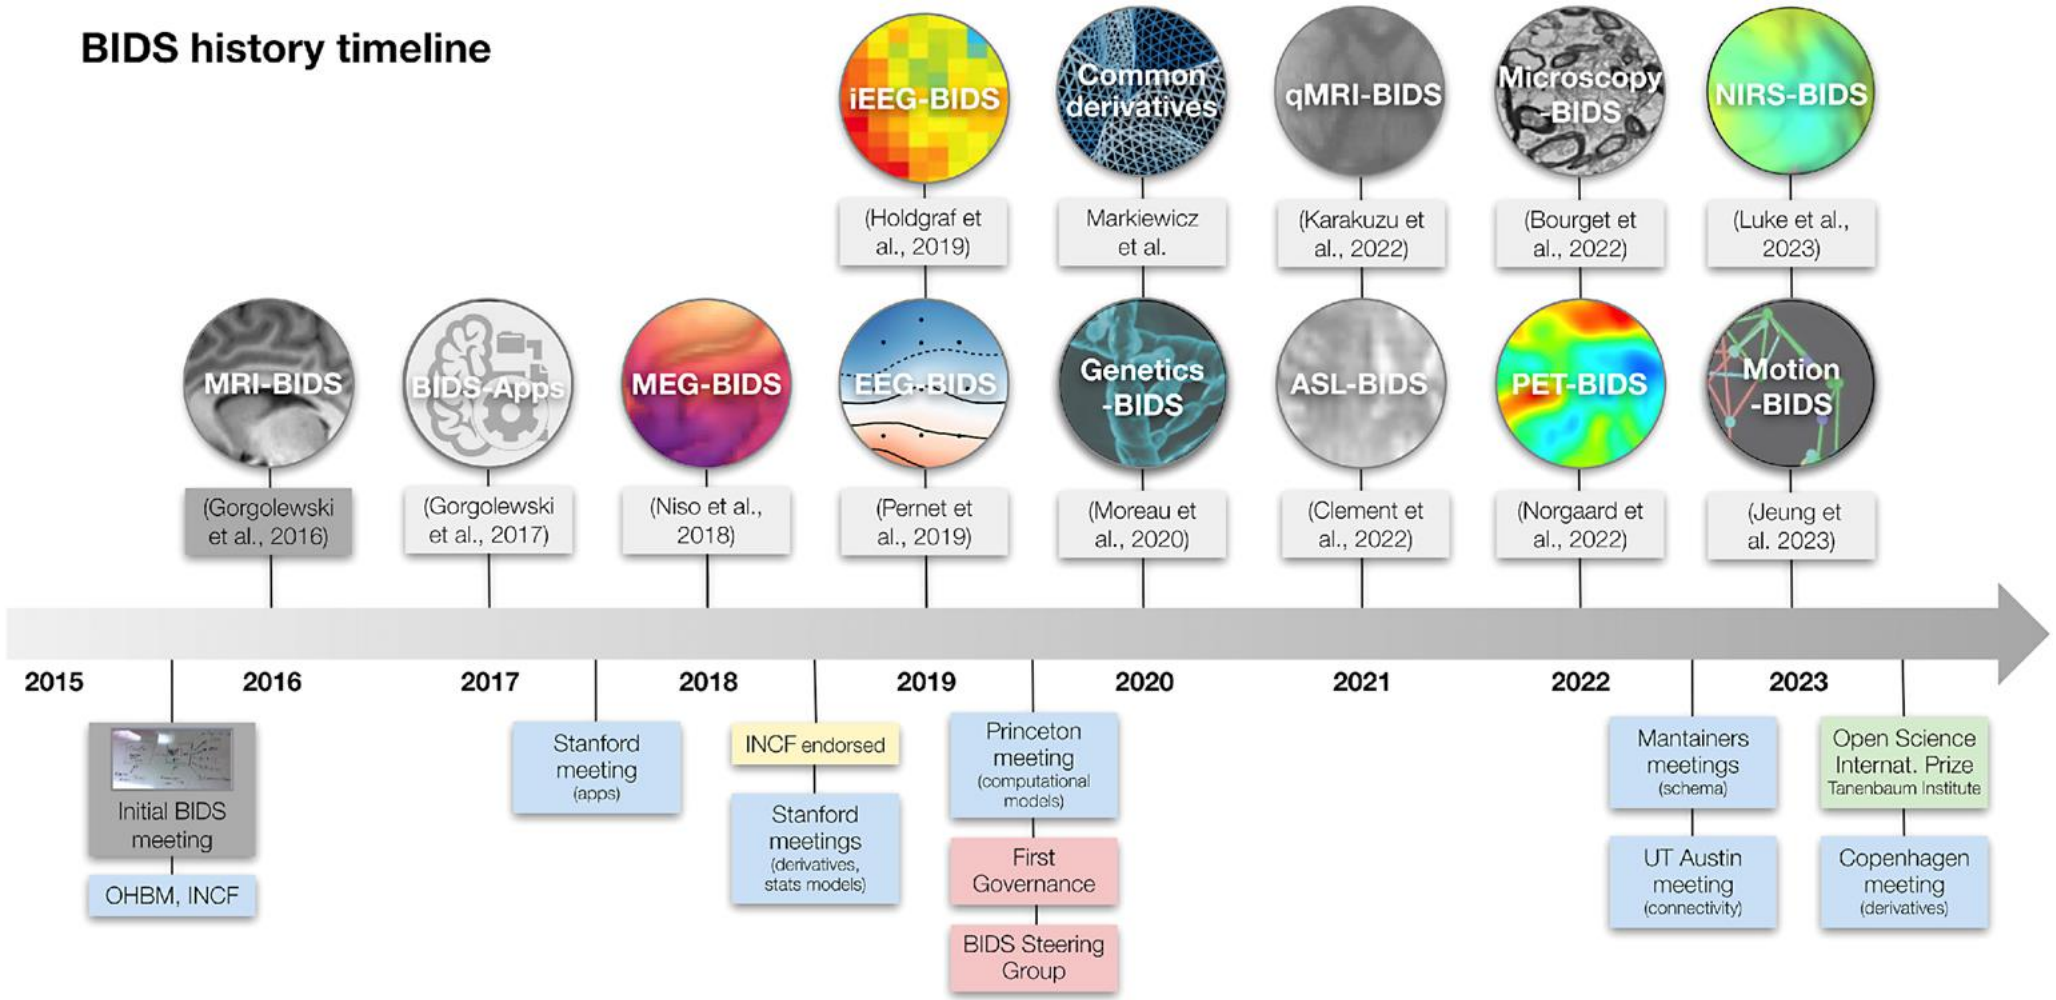
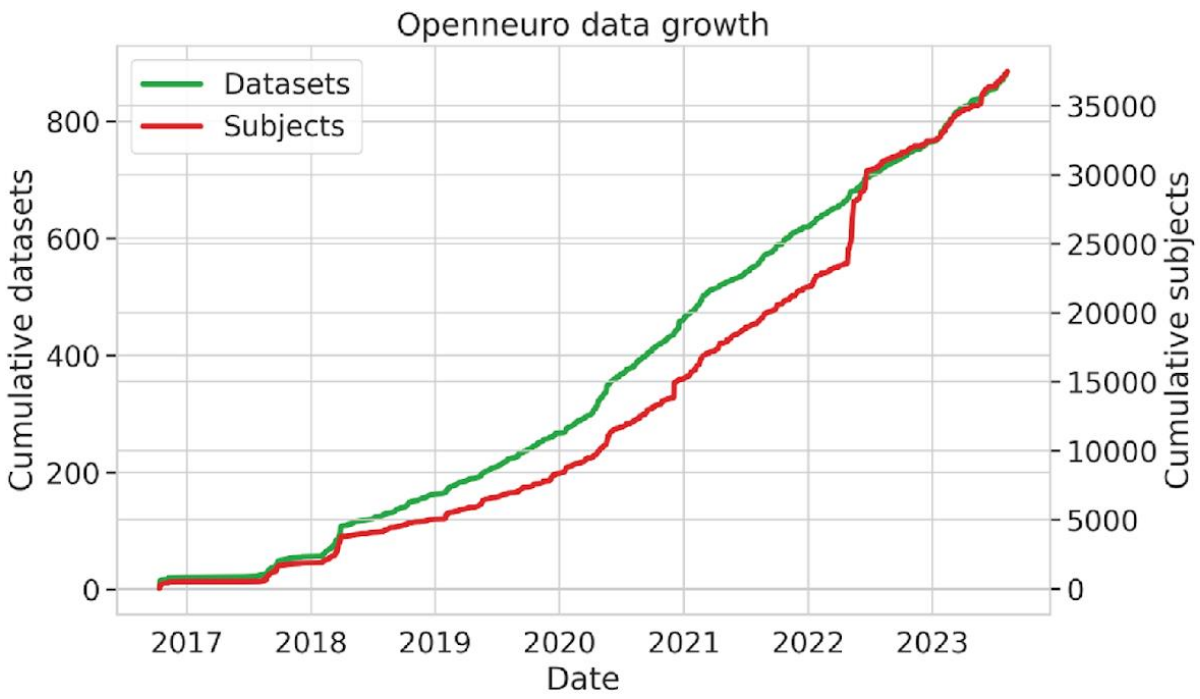
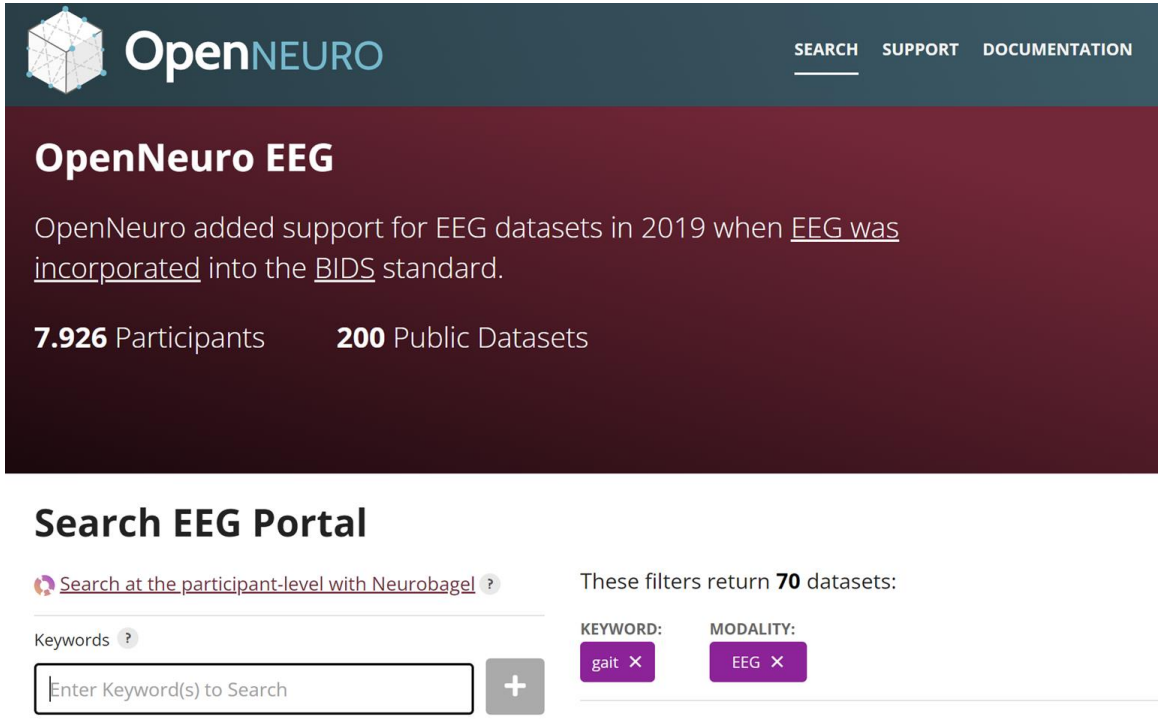
The Past, Present, and Future of BIDS



Poldrack ea., Imaging Neuroscience, 2024

The Past, Present, and Future of BIDS





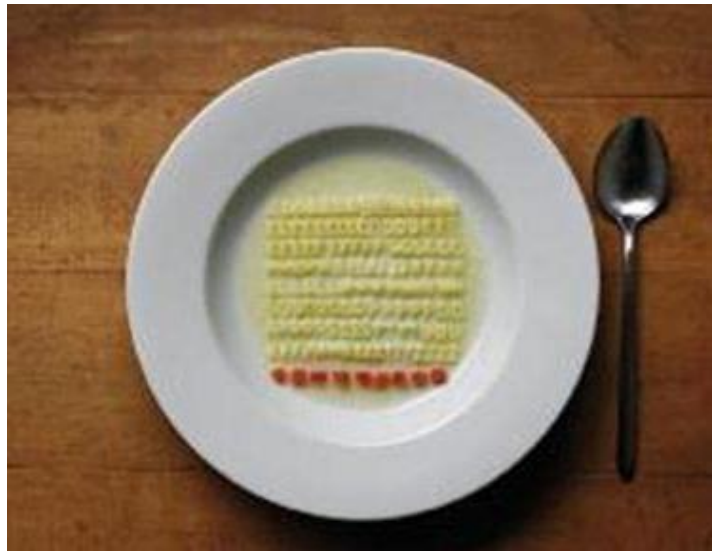
Poldrack ea., Imaging Neuroscience, 2024

What is BIDS?

About 20+ different EEG systems record in different file formats

Dataset info

Motion



Wascher ea., Human Factors, 2023

Remi Gau

Remi-Gau

Follow

I wanted to understand the brain, now I tell people how to name files, folders and variables.

What is BIDS?

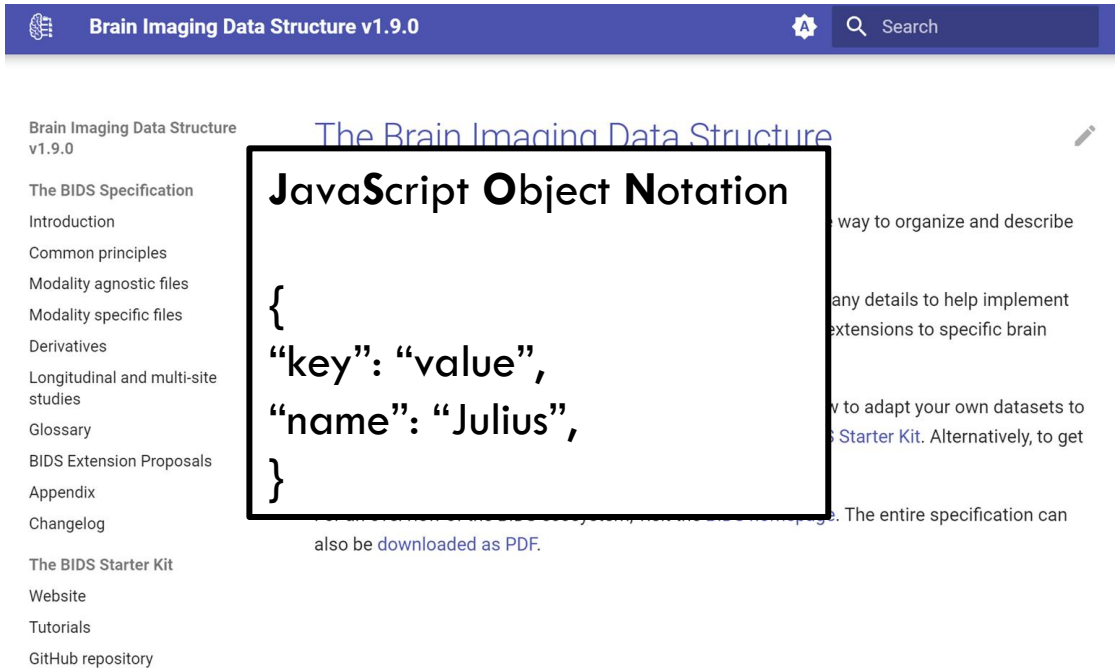
- BIDS is based on simple file formats and folder structures

DATA STRUCTURE

- Which file formats to use, BIDS is **NOT** a file format
- Naming convention for files and directories

METADATA

- Prevents metadata getting lost
- Some metadata is better than no metadata (80/20 rule)
- Stored in **json** files, readable by both humans and machines

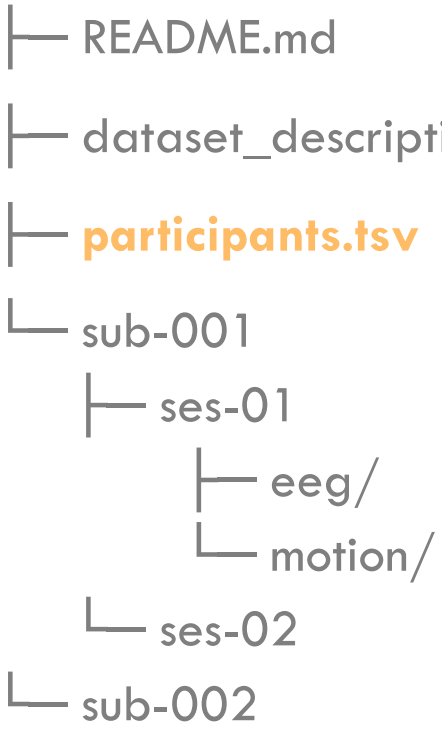


https://bids-specification.readthedocs.io/en/stable/

Requirement levels

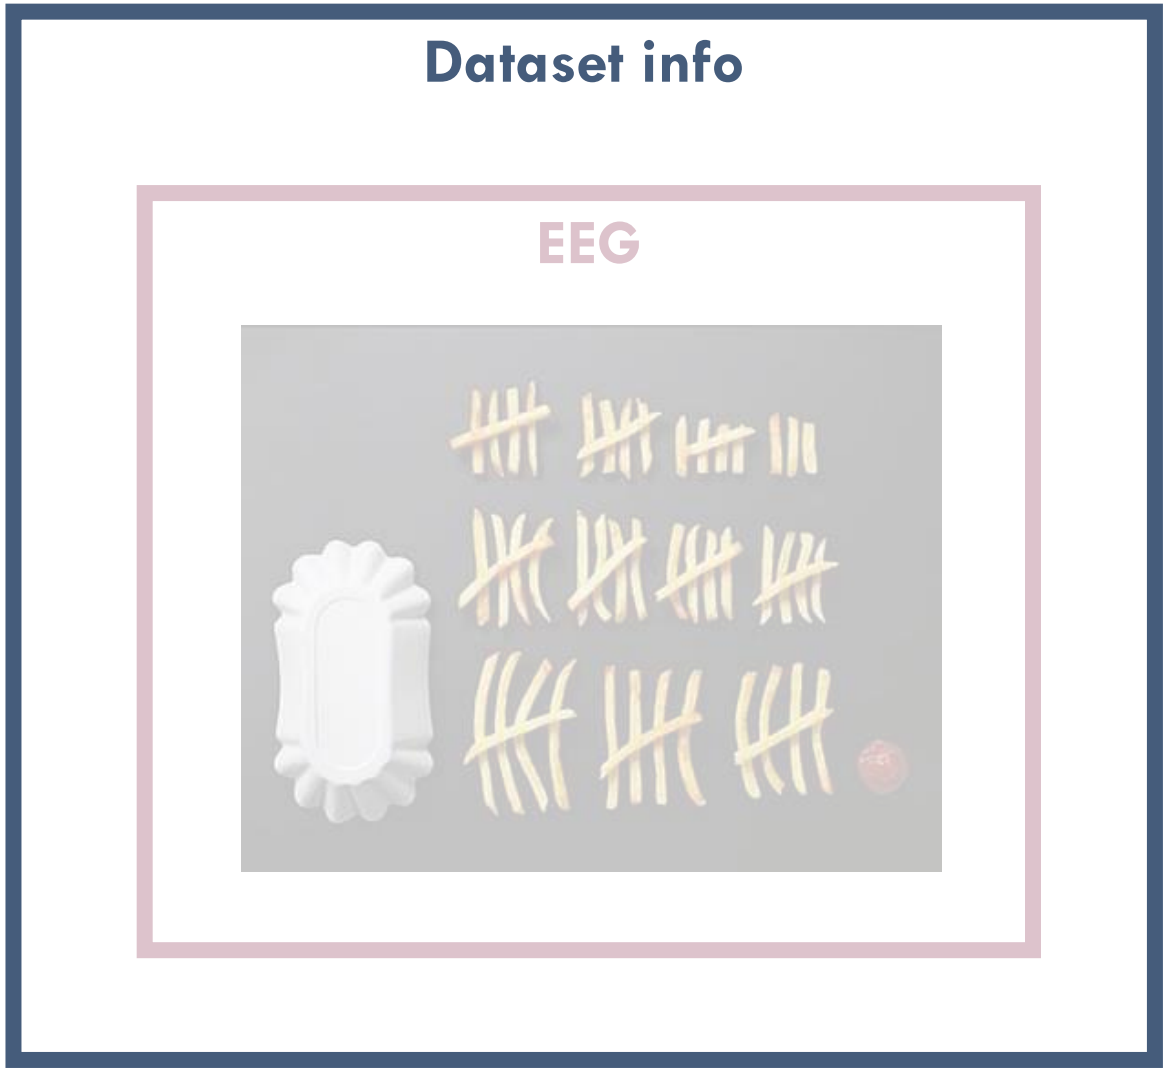
Level of requirement **for** files and **within** files:

1. **REQUIRED**
2. **RECOMMENDED**
3. **OPTIONAL**



participant_id	age	group
sub-001	34	C
sub-002	12	P
sub-003	33	M

https://bids-specification.readthedocs.io/en/stable/03-modality-agnostic-files.html



```

Modality specific data

Directories and file naming structure

- Data for each subject are organized in subdirectories labeled **"sub-<label>"**, with "<label>" representing the unique identification label of each subject
- If subjects participated in multiple sessions, subdirectories labeled **"ses-<label>"** contain session-specific data within the subject directory
- Each session subdirectory (or the subject subdirectory if no session data exists) contains subdirectories for different data types, only defined if files are present for that type
- For a data file that was collected in a given **session** from a given **subject**, the file name **MUST** begin with the string sub-<label>[_ses-<label>]_task-<label>

REF	-0.07	-0.02	-0.01	cup	Ag/AgCl	grey

Column name	Requirement Level	Data type	Description
name	REQUIRED	string	Name of the electrode contact point. Values in `name` MUST be unique. This column must appear **first** in the file.
x	REQUIRED	number	Recorded position along the x-axis. This column must appear **second** in the file.
y	REQUIRED	number	Recorded position along the y-axis. This column must appear **third** in the file.
z	REQUIRED	number or `"n/a"`	Recorded position along the z-axis. This column must appear **fourth** in the file.
type	RECOMMENDED	string	Type of the electrode (for example, cup, ring, clip-on, wire, needle). This column may appear anywhere in the file.
material	RECOMMENDED	string	Material of the electrode (for example, `Tin`, `Ag/AgCl`, `Gold`). This column may appear anywhere in the file.
impedance	RECOMMENDED	number	Impedance of the electrode, units MUST be in `kOhm`. This column may appear anywhere in the file.
Additional Columns	OPTIONAL	`n/a`	Additional columns are allowed if they are defined in the associated metadata file.

Restricted keyword list for channel type

Restricted keyword list for column `type` in alphabetic order. Note that upper-case is REQUIRED:

Keyword	Description
ACCEL	Accelerometer channel, one channel for each spatial axis. Column component for the axis MUST be added to the `*_channels.tsv` file (x, y, or z).
ANGACCEL	Angular acceleration channel, one channel for each spatial axis. Column component for the axis MUST be added to the `*_channels.tsv` file (x, y, or z).
GYRO	Gyrometer channel, one channel for each spatial axis. Column component for the axis MUST be added to the `*_channels.tsv` file (x, y, or z).
JNTANG	Joint angle channel between two fixed axis belonging to two bodyparts. Angle SHOULD be defined between proximal and distal bodypart in deg.

name	component	type	tracked_point	units	reference_frame
t1_acc_x	x	ACCEL	LeftFoot	m/s^2	global
t1_acc_y	y	ACCEL	LeftFoot	m/s^2	global
t1_acc_z	z	ACCEL	LeftFoot	m/s^2	global
t1_gyro_x	x	GYRO	LeftFoot	rad/s	global
t1_gyro_y	y	GYRO	LeftFoot	rad/s	global
t1_gyro_z	z	GYRO	LeftFoot	rad/s	global

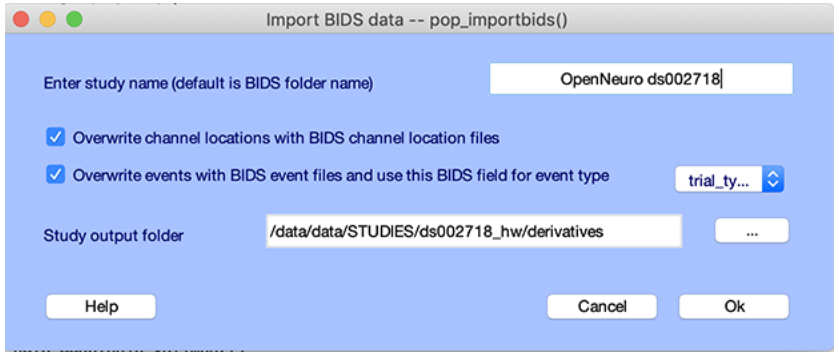
For you

Load public data from the BIDS format

- EEGLab, FieldTrip and MNE provide importers



Converting your data to BIDS

- Reuse data from your Lab and others
- Foster collaborations

```
sub = {'01', '02', '03', '04', '05', '06', '07', '08', '09', '10'};

% for subject 3 the age is unknown, for subject 2 the sex is not specified
age = [11  96  nan 77  82  87  18 40  26  80];
sex = {'f' [] 'f' 'f' 'f' 'm' 'm' 'm' 'm' 'm'};

for subindx=1:numel(sub)

  cfg = [];
  cfg.datatype  = 'eeg';

  % Load your data
  cfg.dataset   =  sub{subindx} + '.edf';

  % specify the output directory
  cfg.bidsroot  = 'bids';

  cfg.sub       = sub{subindx};

  % specify the information for the participants.tsv file
  % this is optional, you can also pass other pieces of info
  cfg.participants.age = age(subindx);
  cfg.participants.sex = sex{subindx};

  % provide the mnemonic and long description of the task
  cfg.TaskName        = 'changedetection';
  cfg.TaskDescription = 'Subjects were responding as fast as possible upon a
                         change in a visually presented stimulus.';

  % these are EEG specific
  cfg.eeg.PowerLineFrequency = 50;   % since recorded in the EU
  cfg.eeg.EEGReference       = 'M1'; % left mastoid

  data2bids(cfg);

end
```

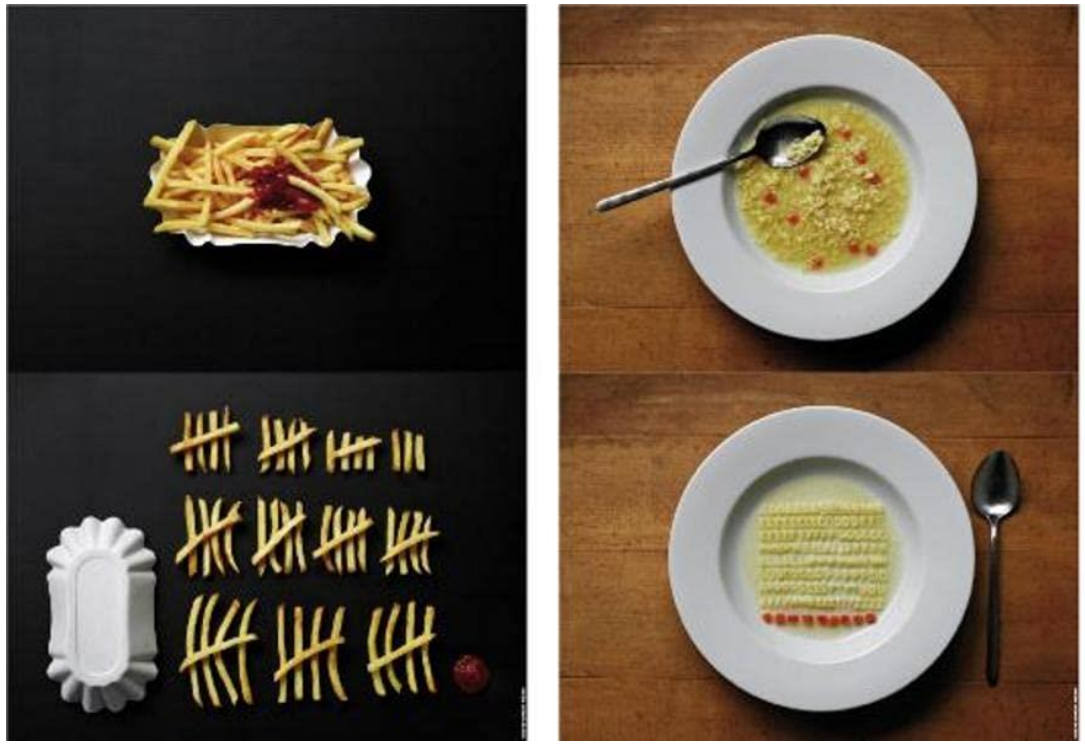
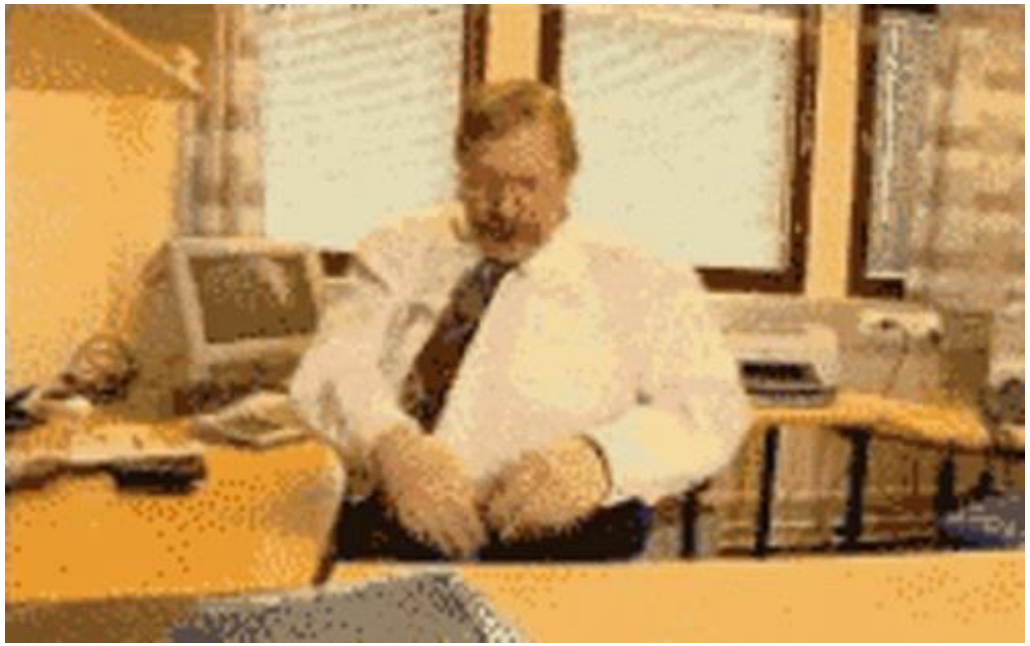
Conclusions

BIDS
BRAIN IMAGING DATA STRUCTURE



Thank you for listening carefully



Thanks to **Sein Jeung** for pushing this to completion over the past three years
Thanks to all of the **BIDS Maintainers and Devs** who help to implement this
Thanks to my **working group,** who have given me the freedom to work in this
Thanks to all **participants** who ever provided data which is now in BIDS
